

FULL STACK INTERNSHIP CHALLENGE - PHOTO SHARING PLATFORM

Software Requirement Document

Document Type:	Requirement Specification	Project:	Photo Sharing Platform
Role:	Full-Stack Internship	Submission Email:	talent@trizen-ai.com
Deadline:	September 20, 2026 — 11:59 PM IST		

1. PROJECT OVERVIEW

Build a full-stack photo-sharing application.

The application should allow a photography/event team to collaboratively upload photographs for an event, allow an Admin/Lead to consolidate and select photographs, and publish a customer-facing gallery protected by a PIN.

The customer should be able to access the published gallery using a shareable link and PIN, without creating an account.

2. USER ROLES

2.1 Admin / Lead

The Admin can:

- Register/Login
- Create an event
- Add team members
- View all photos uploaded by the team
- Select photos for sharing
- Create and publish a gallery
- Generate a shareable link
- Set a PIN for the gallery

2.2 Team Member

A Team Member can:

- Login
- View assigned events
- Upload photos
- View their uploaded photos

Team Members must not be able to publish galleries or manage other users' photos.

2.3 Customer

The Customer does not need an account.

The Customer receives:

- Gallery Link + PIN

They can:

- Open the link
- Enter the PIN
- View the published photos
- Browse the gallery

3. EXPECTED WORKFLOW SEQUENCE

Step	Actor	Action / Event
1	Admin	Creates Event and adds Team Members.
2	Team Member	Uploads event photos to the platform.
3	Admin	Reviews all uploaded photos and selects photos for gallery.
4	Admin	Publishes Gallery and generates access Link + PIN.
5	Customer	Accesses Link, enters PIN, and views published photos.

4. PHOTO UPLOAD & STORAGE REQUIREMENTS

Photos should be stored using appropriate object/file storage, such as AWS S3, Azure Blob Storage, Google Cloud Storage, or an equivalent cloud service. Do not store image files directly in the database.

The database should contain photo metadata such as:

- Photo ID
- Event ID
- Uploaded By
- Filename
- Storage Location
- File Size
- Created At

Multiple photo uploads should be supported.

5. GALLERY MANAGEMENT

The Admin should be able to select photos and publish them as a gallery.

Example Operational State:

Event Name: Arjun & Priya Wedding

Total Uploaded Photos: 1,250 | Selected for Publishing: 600

Generated Gallery Credentials:

Gallery URL: <https://your-domain.com/gallery/abc123>

Access PIN: 482917

Only users with the correct PIN should be able to access the gallery.

6. IMPORTANT TECHNICAL & SECURITY REQUIREMENTS

The application should include:

- Authentication & Role-based authorization
- Secure photo uploads & Object storage integration
- Database schema design & API implementation
- Input validation & Error handling
- Responsive UI & Basic security practices
- Cloud deployment

The application should appropriately handle scenarios such as:

- A user attempting to access another event
- A Team Member attempting to publish a gallery
- A failed photo upload
- An incorrect gallery PIN
- Attempted access to unpublished photos

7. TECHNOLOGY STACK GUIDELINES

There is no mandatory technology stack. You may use any suitable combination of modern backend, frontend, database, and cloud services (e.g., React, Next.js, Node.js, Python, Java, PostgreSQL, MongoDB, AWS, GCP, Docker, etc.).

Choose the technologies you are comfortable with and document your choices.

8. DEPLOYMENT & SUBMISSION DELIVERABLES

The application must be deployed and accessible online.

The submission must include:

- Live application URL
 - Source code repository
 - Demo Admin credentials
 - Demo Team Member credentials
 - Demo Gallery URL & Gallery PIN
-

Do not commit secrets or credentials to Git.

9. DOCUMENTATION (README)

The repository must contain a README .md explaining:

- Project overview & Technology stack
- System Architecture & Database design
- Local setup instructions & Environment variables
- Deployment steps & Known limitations

A simple architecture diagram is encouraged.

10. TESTING REQUIREMENTS

Include basic tests for important functionality, especially:

- Authentication and Authorization
- Photo access controls
- Gallery publishing workflows
- PIN-protected access verification

11. OPTIONAL / BONUS FEATURES

If time permits, you may implement optional features such as image thumbnails/resizing, pagination/infinite scrolling, photo search/filtering, bulk upload, photo downloading, gallery expiration, CDN usage, or automated CI/CD pipelines.

Do not sacrifice core functionality for bonus features.

12. DEVELOPMENT & EVALUATION

You may use any tools, libraries, frameworks, or development approaches that help you build the application. You should understand and be able to explain the code you submit.

During the evaluation, you may be asked to explain your architecture or make a small change to your application.

13. QUALITY CRITERIA & AREAS TO CONSIDER

The following areas are provided as hints to help you think through the quality and completeness of your implementation:

- **Functionality:** Core features should work reliably from end to end.
 - **Frontend & UX:** Build a clean, responsive, intuitive user experience.
 - **Backend & API Design:** Consider clear API structure, validation, error handling, and maintainability.
 - **Database & Architecture:** Think about appropriate data models, relationships, scalability, and overall system architecture.
 - **Security & Authorization:** Protect user data, photos, APIs, authentication flows, and role-based access.
-

- **Cloud & Deployment:** Consider how the application is deployed, configured, monitored, and accessed in a real-world environment.
- **Testing:** Cover important functionality and critical user flows.
- **Code Quality & Documentation:** Keep the code organized, maintainable, and properly documented.

14. FINAL DELIVERABLES SUMMARY

Please ensure the following are included in your submission:

- Source Code
- Live Application
- README
- Architecture / DB explanation
- Demo Credentials
- Tests
- Deployment

Submission Guidelines

Send your completed submission to: **talent@trizen-ai.com**

Submission Deadline: September 20, 2026 — 11:59 PM IST

Please ensure that all required deliverables are accessible and functional at the time of submission.
